

APEX POWER & ROOFING

CSR Standard Operating Procedure

Version 1.0 / Customer Service Representatives

CSR Mission

Every call is an opportunity to book the right job, protect the customer's home, and create a revenue opportunity for Apex. The CSR's job is to qualify the call correctly, book it to the right service type, tag it accurately, and set the customer's expectations before hanging up.

A call that is booked wrong costs the company a tech visit, a customer experience failure, and a lost opportunity.

Section 1: Inbound Call Handling

Greeting

"Thank you for calling Apex Power and Roofing. This is [Your Name], how can I help you today?"

Never answer with just "Hello" or "Apex Power." Always use the full greeting. Always give your name.

Customer Identification

Existing customer:

- Pull up profile by phone number or address
- Confirm: "I have you at [address] — is that the property we're looking at today?"
- Check club membership status and revenue history before qualifying

New customer:

- Capture: First name, last name, service address, best callback number, email
 - Ask: "Is this your primary residence and are you the homeowner?"
-

Section 2: Universal Qualification Questions

Ask every customer these before booking:

The Problem

- "What's happening today?"
- "When did this start?"
- "Is anything actively sparking, leaking, causing damage, or is there a safety concern?"
- "Is the system completely out or partially working?"

The Decision-Maker

- "Will you be home for the appointment?"
- "Is anyone else involved in approving work or repairs?"
- "Are you ready to move forward if the technician finds a solution?"

Access

- "Will someone 18 or older be home?"

- "Are pets secured?"
- For electrical: "Is the panel accessible?" / "Is there attic access if needed?"
- For roofing: "Any gates, HOA requirements, or solar on the roof we should know about?"

Safety (Electrical only)

- If customer mentions burning smell, sparks, shock, or smoke → flag as emergency immediately, do not continue standard booking flow

Section 3: Booking Outcomes

Every call ends in one of these five outcomes:

Outcome	When to Use
Book	Work is in scope, customer has real need, decision-maker available, access confirmed
Escalate Before Booking	Valid call but needs manager, dispatch lead, or department head review first
Callback / Manual Scheduling	Should not be booked by AI or CSR directly — needs human schedule control
Dispatch Review	Job depends on tech level, parts availability, special routing, or sold service work
Refer Out / Do Not Book	Work is outside scope, unsafe, not profitable, or better handled by another trade

Section 4: Electrical Decisioning Matrix

Customer Situation	CSR Action	Booking Decision
No power / complete outage	Confirm panel age, scope,	Book priority electrical

	access, safety	service
Breakers tripping repeatedly	Confirm panel age, what's on circuit	Book service call
Burning smell / sparks / shock	Emergency — safety first	Book priority / escalate immediately
Outlet or switch not working	Confirm isolated vs. widespread	Book service call
Panel 10+ years old with issues	High-opportunity — senior tech	Book L1 service call
Panel upgrade / 200A estimate	Confirm decision-maker, permit comfort	Book estimate
EV charger installation	Confirm panel capacity, decision-maker	Book estimate
Generator install or service	Confirm type, age, access	Book estimate or service
Flickering lights / intermittent	Could be utility — confirm	Book service if customer-side
"Just wants an inspection"	Treat as service unless club member	Book electrical inspection
Active flooding near panel	Safety hazard — do not dispatch yet	Escalate — confirm power off first
Work requires permit	Inform customer — we handle it	Book estimate, note permit required
Customer refuses diagnostic fee	Do not book without manager approval	Escalate
Tenant without owner authorization	Confirm who pays and authorizes	Escalate if unclear
Commercial electrical	Confirm if within scope	Escalate before booking
Appliance repair	Outside scope	Refer out
Low-voltage / data / AV	Outside scope unless offered	Refer out / escalate

Section 5: Roofing Decisioning Matrix

Customer Situation	CSR Action	Booking Decision
Active roof leak	Confirm location, roof type, interior damage	Book inspection / service
Storm damage	Confirm timing, visible damage, urgency	Book inspection
Missing shingles or tiles	Confirm roof type and access	Book if in scope
Full replacement estimate	Confirm decision-maker and ownership	Book estimate

Insurance claim	Confirm claim status and damage type	Book or escalate to roofing lead
Roof over 16 years old	Cannot repair — advise replacement only	Book estimate, explain policy
Solar present on roof	Note on booking — coordinate with solar provider	Book, flag solar in notes
Gutter installation	In scope — book directly	Book gutter service
Gutter repair only (not install)	Confirm if in current scope	Escalate or book if confirmed
Pest / bird / animal on roof	Outside roofing scope	Refer out
Tenant without owner approval	Confirm authorization	Escalate before booking
Customer wants repair on 16+ yr roof	Explain policy, offer estimate	Book estimate only — not repair

Section 6: Do Not Book — Hard Rules

Never book these without manager approval:

- Customer refuses diagnostic or service fee
 - No decision-maker available and no confirmed authorization
 - No access — no one home, locked gate, no attic/panel access
 - Active safety hazard (flooding + electrical, fire risk)
 - Work is clearly outside electrical or roofing scope
 - Roof is 16+ years and customer wants repair only (offer estimate instead)
-

Section 7: Opportunity Classification

Determine before ending the call:

Tag	Criteria
OP (Opportunity)	Customer spent < \$1,000 with us in last 12 months — replacement/upgrade conversation is possible
NO (No Opportunity)	Customer spent > \$1,000 in last 12 months — service/repair only expected

Check revenue history in ServiceTitan. If unclear, default to OP and let the field rep assess.

Section 8: Required Tags — Every Booking

Electrical Booking Tags (all 4 required)

1. **Panel/System Age:** 0–5 | 6–9 | 10+
2. **Level:** L1 | L2 | L3
3. **Opportunity:** OP | NO
4. **Job Summary:** Customer's specific issue in their own words

Optional (when applicable):

- `SAFETY-RISK` — burning smell, shock, sparks reported
- `CLUB-MEMBER` — auto-applied if membership verified
- `PERMIT-REQUIRED` — panel, new circuit, or replacement work

Roofing Booking Tags (all required)

5. **Roof Age:** Customer's best estimate or "unknown"
6. **Roof Type:** Shingle | Tile | Foam | Metal | Unknown
7. **Stories:** 1 | 2 | 3+
8. **Solar:** Yes | No
9. **Job Summary:** Customer's specific concern

Section 9: Finalizing the Booking

Before ending every call:

10. Confirm the appointment date and provide a **3-hour arrival window**
 11. Tell the customer: *"You'll receive a text with your technician's name and photo when they're on their way."*
 12. For electrical estimates: *"Your technician will walk you through all options and pricing on-site — we handle the permit process from start to finish."*
 13. For roofing: *"Our estimator will bring everything needed for a full inspection. If your roof has solar, please have your solar provider's contact info handy."*
 14. Confirm callback number is correct in ServiceTitan
-

Section 10: After-Hours and Emergency Protocol

Electrical emergencies (sparks, shock, no power to whole home, burning smell):

- Book as emergency / priority
- Notify on-call dispatcher immediately
- Advise customer to turn off the main breaker if safe to do so while waiting

Roofing emergencies (active interior water damage, ceiling collapse risk):

- Book inspection / emergency tarp
- Notify on-call dispatcher
- Advise customer to move valuables and place containers under active leaks

After-hours surcharge: \$149 electrical | \$199 roofing tarp call-out. Waived for club members.

Section 11: Common Scripts

Customer wants price over the phone:

"I completely understand — our technician needs to see the issue in person to give you an accurate number. We never want to guess on electrical or roof work. The diagnostic visit is \$89 and is waived if you approve any work."

Customer has a home warranty:

"We don't bill home warranty companies directly, but we can provide you with a detailed repair report you can submit to them for reimbursement."

Customer says it's not urgent, just curious:

"That's totally fine — would you like to get on the schedule while we have availability? We can usually get someone out within [X days] and the estimate is free."

Customer asks about permits:

"We handle the entire permit process — pulling it, scheduling the inspection, and getting you the final sign-off. You don't have to do a thing."

Club member calling:

*Acknowledge membership immediately: *"I see you're an Apex Home Protection Plan member — you get priority scheduling and your after-hours fee is waived. Let me get you taken care of."**

Section 12: What Good Looks Like

A CSR call is done correctly when:

- Customer's name, address, phone, and email are in ServiceTitan
- All 4 electrical tags OR all 5 roofing tags are applied
- Opportunity status (OP or NO) is set
- Job summary captures the customer's actual words — not CSR interpretation
- Appointment window was confirmed verbally
- Customer knows what to expect (tech photo, 3-hour window, fee waiver policy)
- Any safety flag is documented and escalated

A CSR call is done wrong when:

- Job is booked without confirming access or decision-maker presence
- Tags are missing or defaulted without checking
- Pricing is given over the phone
- A safety emergency is treated as a standard booking
- A 16+ year roof repair is booked instead of an estimate
