

APEX POWER & ROOFING

Sales Rep / Field Technician Standard Operating Procedure

Version 1.0 / Electricians / Roofing Estimators / Field Reps

Field Rep Mission

You are not just fixing a problem — you are the customer's trusted advisor on their home. Your job is to diagnose accurately, present options clearly, and give the customer the information they need to make a confident decision.

Every visit has three possible outcomes: sold repair, sold replacement/upgrade, or a qualified reason why neither happened. There is no such thing as a "nothing to sell" call on an OP-tagged job — if you left without a signed work order, document why.

Section 1: Before You Arrive

Review the Job Ticket

Before leaving for the call, confirm in ServiceTitan:

- Customer name, address, access notes
- Job type and level (L1 / L2 / L3)
- Opportunity status (OP or NO)
- Club membership status
- Job summary notes from CSR
- Any safety flags (SAFETY-RISK tag)
- Prior call history — what has been done before?

Load Your Vehicle

Ensure you have:

Electrical:

- Multimeter, clamp meter, voltage tester, IR thermometer
- AFCI/GFCI breakers (common sizes)
- Common outlets, switches, wire connectors
- Panel inspection checklist
- Estimate forms / tablet with ServiceTitan access
- Permit application forms (for estimate calls)

Roofing:

- Camera / tablet for photo documentation
 - Moisture meter
 - Inspection checklist
 - Ladder (confirm stories from CSR notes)
 - Tarp + staple gun for emergency calls
 - Estimate forms
-

Section 2: Arrival and Introduction

At the Door

"Hi, I'm [Name] from Apex Power and Roofing — you should have gotten a text with my photo. Thanks for having me out today."

- Always introduce yourself by name and company
- Confirm you are speaking with the decision-maker: *"Are you the homeowner I'll be working with today?"*

- If decision-maker is not home: call the office before proceeding — do not diagnose or present options without them present

Walk-In Questions (first 2 minutes)

Before touching anything, ask:

- "Can you walk me through what you've been experiencing?"
- "When did this start — was there anything that happened right before it?"
- "Has anyone else looked at this before me?"
- "Is there anything else in the home related to this that's been bothering you?" (*opens secondary opportunities*)

Listen more than you talk. Let the customer show you the problem before you form your opinion.

Section 3: Diagnosis

Electrical Diagnosis Protocol

1. **Safety first:** Check for any active hazards before proceeding (burning smell, exposed wiring, water near panel)
2. **Document before touching:** Take photos of the panel, affected circuits, and any visible damage
3. **Test and trace:** Use meters to confirm the fault — do not guess
4. **Check the panel:**
 - Age and brand (note if Federal Pacific, Zinsco, or aluminum wiring — these require disclosure and escalation)
 - Capacity vs. current load
 - Condition of breakers, bus bar, wiring

5. **If this is an L1 call (10+ yr panel):** Always assess full panel condition, not just the reported issue. Look for upgrade opportunity.
6. **Document findings:** Photo, meter readings, and written notes in ServiceTitan before presenting options

Roofing Inspection Protocol

7. **Ground-level walkthrough first:** Look for visible sagging, missing material, damaged fascia, gutter condition
 8. **Roof access:** Take photos on every surface — every face, every valley, every penetration
 9. **Check:** Flashing around chimneys, vents, skylights, and walls; underlayment exposure; granule loss; blistering or lifting
 10. **Attic check (if accessible):** Look for moisture staining, daylight, or compromised decking
 11. **Moisture meter:** Use on any area of suspected leak — document readings
 12. **Roof age rule:** If roof is 16+ years — confirm and document. No repair quotes. Replacement estimate only.
 13. **Photo everything:** Minimum 10 photos per inspection. Customer should see what you saw.
-

Section 4: Presenting Options

The Three-Option Rule

Always present **three options** — never one. This is non-negotiable on OP-tagged calls.

Option	Description	Purpose
Good	Address only the immediate reported issue	Minimum commitment, gets them going
Better	Fix the issue + address related risks found during inspection	More complete, longer lasting
Best	Full solution — replacement, upgrade, or	Maximum protection and value

	comprehensive repair	
--	----------------------	--

Present in this order: Best → Better → Good. Lead with the full solution. Explain the tradeoffs of each. Let the customer choose — do not pre-select for them.

Script:

"I found a few things today. Let me walk you through your options so you can decide what makes the most sense for your situation..."

Section 5: Electrical Sales Conversations

L1 Panel Call (10+ years, OP-tagged)

After diagnosis:

"Your panel is [X] years old, and what I'm seeing today is [finding]. The repair to fix just this issue would be [Good option]. But I also want to show you what else I found during my inspection, because on a panel this age, there are a few things worth knowing about..."

Present the panel upgrade as the Best option. Include:

- Current capacity vs. modern home demands
- EV charger readiness (if applicable)
- Safety improvement
- Permit and warranty included

Objection: "I just want to fix the one breaker."

"Absolutely — that's your call and I can do that today. I just want to make sure you know what else is going on so you can decide with full information. The repair is [price]. If you ever want to revisit the panel, I'll document everything today and it's on file."

L2/L3 Service Call

Diagnose first. Present options based on what you found. On L2/L3 calls where the system is younger and likely in good shape, your job is still to check for secondary opportunities (e.g., surge protection, GFCI updates, EV charger interest).

"While I was looking at this, I noticed your home doesn't have whole-home surge protection. A lot of homeowners in Phoenix get that added when we're already out — it's [price] and takes about 30 minutes. Want me to include that?"

Club Membership Offer

Offer on every call where the customer is not already a member:

"One more thing before I wrap up — do you know about our Home Protection Plan? For \$19.99 a month you get an annual electrical inspection, annual roof inspection, 10% off all work, and priority scheduling. A lot of our customers add it when we're already here — it's the easiest time to do it."

Section 6: Roofing Sales Conversations

Repair Call

After inspection:

"Here's what I found. [Show photos on tablet.] This area here is where the leak is coming from — you can see the flashing has separated. I have three ways we can handle this..."

Good: Spot repair of the failed flashing only

Better: Repair + address the two secondary areas showing wear nearby

Best: Full section replacement to address root cause and prevent recurrence

Replacement Estimate Call

"Based on what I'm seeing today — the age of the roof, the granule loss on these sections, and the condition of the underlayment — I want to walk you through your replacement options. I'll show you two material choices and explain what each one means for the life of your roof and your home's value."

Present:

- Material options (shingle, tile, foam) based on existing system and budget
- Warranty terms for each
- Timeline and permit process (we handle it)
- Payment options if available

16+ year roof — repair request:

"I understand you were hoping for a repair. The honest answer is that at [X] years, this roof has reached the end of its service life. Any repair we do would be putting new material on a compromised base — and we'd be giving you a warranty on work that the roof structure can't support. I'm not willing to do that to you. What I can do is give you a full replacement quote today."

Section 7: Objection Handling

Objection	Response
"That's more than I expected."	"I hear you. Let me show you the minimum option — here's what that gets you and what it doesn't. What's most important to you right now?"
"I need to talk to my spouse."	"Completely understand. Would it help if I called back when you're both available? I can also email the full quote so you both have it in front of you."
"I got a cheaper quote."	"Can I ask what was included in that quote? Sometimes we're quoting different scopes. I want to make sure you're comparing apples to apples — the permit, the materials, the warranty."
"I'll wait and see."	"That's your call. I do want to make sure you know that [specific risk from findings] — the longer that sits, the more it can affect [X]. I'll document everything today either way."
"I just want the minimum."	Accept it. Book the Good option. Document the other findings in ServiceTitan. Do not pressure.

Section 8: Closing the Job

Verbal Close

"Based on everything we talked about, which option feels like the right fit for you today?"

Do not volunteer "take your time" after presenting options. Ask the question. Be comfortable with silence.

Written Confirmation

- Get customer signature on the work order in ServiceTitan before starting any work

- Confirm: scope of work, price, payment method, start date (for larger jobs)
- For estimates: confirm: *"I'll send this over by email and follow up in [X days] — does that work?"*

After the Job

- Walk the customer through what was done
 - Show photos of before/after where applicable
 - Ask: *"Is there anything else in the home that's been on your mind — electrical or roofing?"*
 - Prompt club membership if not already a member
 - Request a review: *"If you felt taken care of today, a Google review means a lot to our team — I'll text you the link."*
 - Update ServiceTitan: job status, notes, photos, next steps
-

Section 9: What to Document in Every Job

Before leaving the property, ServiceTitan must have:

Electrical:

- Panel age, brand, condition rating
- Specific fault found and confirmation method (meter readings)
- All three options presented and prices
- What was sold and why
- If nothing sold: specific reason (customer declined, decision-maker absent, price objection)
- Photos: panel, fault, completed work

Roofing:

- Roof age, material, condition rating
- All areas inspected — with photo for each area flagged
- Leak source confirmed (yes/no) with moisture meter reading

- All three options presented and prices
 - What was sold and why
 - If nothing sold: reason
 - Minimum 10 photos filed
-

Section 10: Behaviors That Are Never Acceptable

- Starting work without a signed work order
 - Quoting a repair on a 16+ year roof
 - Diagnosing or presenting options without the decision-maker present
 - Giving a price over the phone on follow-up calls (direct to office)
 - Leaving a job with an unsold OP-tagged call and no documented reason
 - Failing to disclose Federal Pacific, Zinsco, or aluminum wiring findings
 - Working near active water / flooding hazard without safety clearance
 - Promising a permit timeline you have not confirmed with the office
-

Section 11: Performance Benchmarks

Metric	Target
Conversion rate (OP-tagged calls)	≥ 60%
Average job value (electrical service)	≥ \$450
Average job value (roofing inspection to signed work)	≥ \$2,500
Club membership offer rate	100% of non-member calls
ServiceTitan job documentation complete before leaving	100%
Customer satisfaction (post-job survey)	≥ 4.7 / 5.0
